

## Bridge Guides

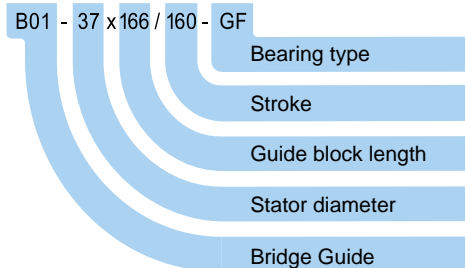

Series B01 bridge guides are compact guide units with integrated ball bearings or plain bushings, for operating LinMot P01 linear motors with high-clearance sliders. The rear end plate increases the mechanical stiffness of the bridge guide.

Bridge Guides are used as load bearings, to resist external forces and rotational and bending moments, and as an anti-rotation device. They provide high-precision guidance and allow dynamic and precise positioning of the load.

The load is mounted directly to the front plate of the linear guide. Mechanical dimensions and mounting options are compatible with pneumatic linear guides. The modular design allows simple addition of accessories, such as a mechanical brake or magnetic spring, for load balancing in vertical applications.

Designation:

### Mechanical Compatibility

LinMot B01 bridge guides are mechanically compatible with pneumatic H-guides.

This allows simple replacement with a new drive technology, if more flexibility or higher dynamics are required.

### Ball Bearings

Use of linear guides with ball bearings is recommended for standard applications under normal environmental conditions.

Linear guides with ball bearings have very good running characteristics, and ensure nearly frictionless operation.

### Sintered Bushing

For applications in very dirty, damp, or wet environments, the use of linear guides with bushing and stainless steel shafts is recommended.

For highly dynamic applications with accelerations over 50 m/s<sup>2</sup>, the use of bridge modules with Plain Bushings is also recommended.

1. Mounting plate with counter bore for precise load mounting
2. Hardened or stainless steel shafts for precise positioning and quiet operation.
3. Ball bearings or plain bushings, for high load masses and long life
4. Guide block with counter bores for uncomplicated, precise mounting of the Bridge Module.
5. Mechanical end stop (rear).
6. Linear motor stator with integrated bearings, temperature and position sensors. Available with IP67 connector housing or cable exit.
7. Clamping cylinder to secure the stator in the guide block.
8. T-slots in the guide block allow simple mounting of accessories.
9. Linear motor slider, guarantees maximum force and precise positioning.
10. Integrated linear coupling for simple mounting of the slider.

## Bridge Module BM01

Complete BM01 bridge modules, consisting of a B01 bridge guide and P01 linear motor, are highly dynamic design components. Compact construction and free positioning have significant advantages, especially in textile and packaging machines, assembly and feeding technology, laboratory automation, and special machines and systems.

Designation:

### Brake Option

As an option, B01-37 (600N Holding Force) and B01-48 (1000N) guides can have a mechanical brake attached.

The pneumatic brake is controlled by the E1100 Servo Drive. The brake acts on the guide shafts of the linear guide, and is released under air pressure (4-6 bar). With no air pressure, the brake is on.

### MagSpring Option

In vertical applications, a MagSpring can be used as a weight balancer.

The MagSpring also prevents the linear motor from falling to the lower end stop if the linear motor is turned off or the power is lost. Appropriate accessories are available for mounting the magnetic spring.

### Fan Option

With an additional fan, the holding force of the linear motor can be nearly doubled.

If needed, the optional fan can be mounted directly on the guide.

## Positioning Times with BM01-37x120

Minimum positioning times for horizontal motions with different load masses, controlled by an E1100-HC Servo Drive.

## Ordering Information

BM01-37x120/160		Bridge Module 37x120 with 160mm stroke <sup>1)</sup>

## Maximum Load

H = Stroke  
 X = Distance to center of gravity  
 S = Center of gravity

Cantilever extension =  $H + X$

The maximum load depends on the cantilever extension (maximum stroke A plus distance between the center of gravity of the working load and the mounting surface).

## Vertical Deflection

H = Stroke  
 X = Distance to center of gravity  
 S = Center of gravity  
 f = Deflection of theoretical axis

Total deflection = static deflection + deflection under load

Deflection measured at standstill, with 10 N / 2.25 lbf load.

Deflection for smaller or larger load masses can be linearly extrapolated using the data for 10 N / 2.25 lbf.

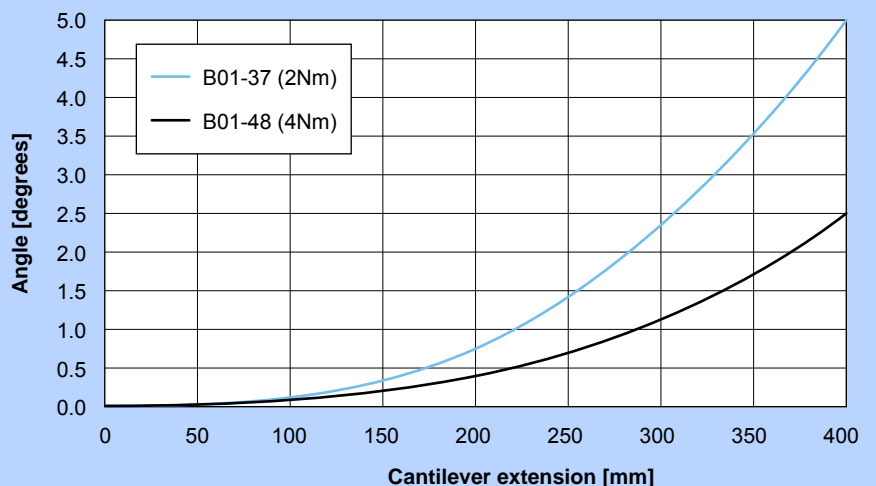

## Angular Deflection

Angular deflection (twist) of the mounting plate depends on the torque load to be absorbed and the cantilever extension.

The angular deflection for smaller or larger torques can be linearly extrapolated from the deflection in the diagram.
